5

ABSTRACT

A system and method for displaying medical information derived from a plurality of sources is described. Medical data associated with a patient are acquired from at least one of the plurality of sources on the network. The acquired data are prioritized for

10   display in a desired order and/or time frame. A menu generator is used for generating a composite window for displaying the ordered acquired data in a first window together with at least one of user-entered medical notes, medical laboratory results and ventilator data in a second window.
